

**Tone Ringer For Telephone Set**

The PJ31002 is a bipolar integrated circuit designed for telephone bell replacement.

**FEATURES**

- Oscillation frequency is variable
- Few external components
- Sustaining power is low
- Package is compact ( DIP-8)
- Current consumption is small

**ORDERING INFORMATION**

Device	Operating Temperature	Package
PJ31002CD	-20°C ~ +85°C	DIP-8

Operating Temperature Range	Topr	-20 ~ +85	°C
Storage Temperature Range	Tstg	-55 ~ +125	°C

**Tone Ringer For Telephone Set**

( NOTE 1 ) Supply initiation voltage is the value of DC supply voltage required to start the tone ringer oscillation.

( NOTE 2 ) Sustaining voltage is the value of DC supply voltage required to maintain oscillation.

( NOTE 3 ) Oscillator frequency is determined by the following equations :

$$fL = 1 / ( 1.234 * R1 * C1 ) \quad \text{Hz}$$

$$fH1 = 1 / ( 1.515 * R2 * C2 ) \quad \text{Hz}$$

$$fH2 = 1.24 * fH1 \quad \text{Hz}$$

( NOTE 4 ) Ringing start voltage is the value of AC supply voltage required to start the tone ringer ringing in FIG.3

( NOTE 5 ) This product is not designed for protection against radioactive rays.

( NOTE 6 ) All data and specifications are subject to change without notice.

HOW TO USE THE RSL PIN

In the IC, the supply initiation current (I<sub>si</sub>) can be changed using the RSL Pin . As show is the diagram, the RSL (Pin 2) is grounded through resistor R<sub>s</sub>. By changing the R<sub>s</sub> value, supply initiation current can be changed.

Supply voltage (V<sub>cc</sub>) vs. supply current (I<sub>cc</sub>) characteristics resulting from changes in the value of R<sub>s</sub> are shown in the following diagram.
