

# LM3445 Off-Line TRIAC Dimmer LED Driver Demo Board

National Semiconductor  
Application Note 1935  
Matthew Reynolds  
April 14, 2009

## Introduction

The demonstration board included in this shipment converts 90V<sub>AC</sub> to 135V<sub>AC</sub> input, and drives seven, or eight series connected LED's at 350 mA average current. The LM3445 switching frequency is set at a nominal 225 kHz. This is a four-layer board using the bottom and top layer for component placement. The demonstration board can be modified to adjust the LED forward current, the number of series connected LEDs and switching frequency. Refer to the LM3445 datasheet for detailed instructions.

A bill of materials below describes the parts used on this demonstration board. A schematic and layout have also been

included below along with measured performance characteristics. The above restrictions for the input voltage are valid only for the demonstration board as shipped with the schematic below. Please refer to the LM3445 data sheet for detailed information regarding the LM3445 device, and the application circuit

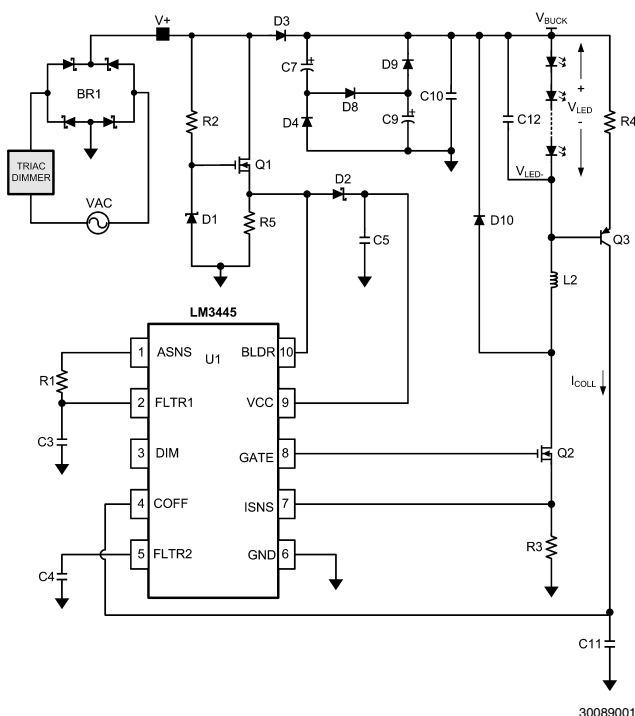

## Operating Conditions

$V_{IN} = 90V_{AC}$  to  $135V_{AC}$

Seven, or eight series connected LEDs

$I_{LED} = 350$  mA

## Simplified LM3445 Schematic and Efficiency Plot

30089002

**Warning** The LM3445 evaluation boards have no isolation or any type of protection from shock. Caution must be taken when handling evaluation board. Avoid touching evaluation board, and removing any cables while evaluation board is operating. Isolating the evaluation board rather than the oscilloscope is highly recommended.

## Pin-Out

10-Pin MSOP

30089003

### Pin Description 10 Pin MSOP

Pin #	Name	Description
1	ASNS	PWM output of the triac dim decoder circuit. Outputs a 0 to 4V PWM signal with a duty cycle proportional to the triac dimmer on-time.
2	FLTR1	First filter input. The 120Hz PWM signal from ASNS is filtered to a DC signal and compared to a 1 to 3V, 5.85 kHz ramp to generate a higher frequency PWM signal with a duty cycle proportional to the triac dimmer firing angle. Pull above 4.9V (typical) to tri-state DIM.
3	DIM	Input/output dual function dim pin. This pin can be driven with an external PWM signal to dim the LEDs. It may also be used as an output signal and connected to the DIM pin of other LM3445 or LED drivers to dim multiple LED circuits simultaneously.
4	COFF	OFF time setting pin. A user set current and capacitor connected from the output to this pin sets the constant OFF time of the switching controller.
5	FLTR2	Second filter input. A capacitor tied to this pin filters the PWM dimming signal to supply a DC voltage to control the LED current. Could also be used as an analog dimming input.
6	GND	Circuit ground connection.
7	ISNS	LED current sense pin. Connect a resistor from main switching MOSFET source, ISNS to GND to set the maximum LED current.
8	GATE	Power MOSFET driver pin. This output provides the gate drive for the power switching MOSFET of the buck controller.
9	V <sub>CC</sub>	Input voltage pin. This pin provides the power for the internal control circuitry and gate driver.
10	BLDR	Bleeder pin. Provides the input signal to the angle detect circuitry as well as a current path through a switched 230Ω resistor to ensure proper firing of the triac dimmer.

LM3445 Efficiency vs Input Voltage  
8 and 12 Series connected LEDs @ 350 mA

**LM3445 Loads and No Load components:** This LM3445 evaluation PCB has been built to allow the end user to add or delete EMI circuitry, and an input over-voltage TVS. The input common mode choke (L1), both differential chokes (L3 and

L4) solder pads are created so that 0 ohm 1206 resistors (R18, R19, R20, and R21) can short the components circuit path if necessary.

## PCB Layout

Top Layer

30089005

Bottom Layer

30089006

**Warning :** The LM3445 evaluation boards have no isolation or any type of protection from shock. Caution must be taken when handling evaluation board. Avoid touching evaluation board, and removing any cables while evaluation board is operating. Isolating the evaluation board rather than the oscilloscope is highly recommended.

### LIFE SUPPORT POLICY

**NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS PRIOR WRITTEN APPROVAL OF THE CHIEF EXECUTIVE OFFICER AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION.** As used herein:

Life support devices or systems are devices which (a) are intended for surgical implant into the body, or (b) support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in a significant injury to the user. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system or to affect its safety or effectiveness.
