

Introduction

The LM3670 evaluation board is a working demonstration of a step down DC-DC converter. This application note contains information about the evaluation board. For further information on buck converter topology, device electrical characteristics, and component selection please refer to the datasheet.

General Description

The LM3670 converts high input voltages to lower output voltages with high efficiency through an inductor based switching topology. Automatic intelligent switching between PWM low-

noise and PFM low-current mode offers improved system control. LM3670 is available in both fixed output voltage options (1.2V, 1.5V, 1.6V, 1.8V, 1.875V, 2.5V, 3.3V) and adjustable voltage options range from 0.7V to 2.5V. The LM3670 is available in a SOT23-5 package.

Operating Conditions

- V_{IN} range: $2.5V \leq V_{IN} \leq 5.5V$
- Recommended load current: $0mA \leq I_{OUT} \leq 350mA$
- Ambient temperature (T_A) range: $-40C$ to $+85C$
- Junction temperature (T_J) range: $-40C$ to $+125C$

Typical Application

FIGURE 1. Fixed Output Voltage--Typical Application Circuit

FIGURE 2. Adjustable Output Voltage—Typical Application Circuit

Output Voltage Selection for LM3670MF-ADJ

The output voltage of the adjustable parts can be programmed through the resistor network connected from V_{OUT} to V_{FB} to GND. The resistor from V_{FB} to GND (R_2) should be at least 100k Ω to keep the current sunk through this network well below 15 μ A quiescent current level (PFM mode with no switching) but large enough that it is not susceptible to noise. If R_2 is 200k Ω , and given the V_{FB} is 0.5V, then the current through the resistor feedback network will be 2.5 μ A ($I_{FB} = 0.5V/R_2$). The output voltage formula is:

$$V_{OUT} = V_{FB} \left(\frac{R_1}{R_2} + 1 \right)$$

V_{OUT} : output voltage (V)

V_{FB} : feedback voltage (0.5V typical)

R_1 : feedback resistor from V_{OUT} to V_{FB} (Ω)

R_2 : feedback resistor from V_{FB} to GND (Ω)

For the fixed output voltage parts the feedback resistors are internal and R_1 is 0 Ω .

The bypass capacitors C_1 and C_2 (labeled C_4 and C_5 on Evaluation Board) in parallel with the feedback resistors are chosen for increased stability. Below are the formulas for C_1 and C_2 .

$$C_1 = \frac{1}{2 * \pi * R_1 * 10 \text{ kHz}}$$

$$C_2 = \frac{1}{2 * \pi * R_2 * 10 \text{ kHz}}$$

TABLE 1. Adjustable LM3670 Configurations for Various V_{OUT}

V_{OUT} (V)	R_1 (k Ω)	R_2 (k Ω)	C_1 (pF)	C_2 (pF)	L (μ H)	C_{IN} (μ F)	C_{OUT} (μ F)
0.7	80.6	200	200	150	4.7	4.7	10

2.5	806	200	22	82	10	4.7	22

Powering the LM3670 for Bench Measurements

When powering the LM3670 with a bench power supply, it is recommended to place a 100 μ F tantalum capacitor across the V_{IN} and GND supply terminals of the bench power supply. This capacitor will reduce the input spike caused by the power

supply and long power cables. The combination of the power supply and inductance within the power cables produce a large voltage spike that may damage the device. In addition, consideration must also be looked at the enable pin of the device. The enable should never be taken high, until minimum guaranteed operating voltage of 2.7V is reached. The enable pin should also never exceed the input voltage.

Connection Diagram and Package Mark Information

FIGURE 3. SOT23–5 Package-Top View

Pin Descriptions

Pin #	Name	Description
1	V _{IN}	Power supply input. Connect to the input filter capacitor
2	GND	Ground pin
3	EN	Enable input
4	FB	Feedback analog input. Connect to the output filter capacitor
5	SW	Switching node connection to the internal PFET switch and NFET synchronous rectifier. Connect to an inductor with a saturation current rating that exceeds the 750 mA max. Switch Peak Current Limit Specification.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS PRIOR WRITTEN APPROVAL OF THE CHIEF EXECUTIVE OFFICER AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

Life support devices or systems are devices which (a) are intended for surgical implant into the body, or (b) support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in a significant injury to the user. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system or to affect its safety or effectiveness.
